PROFESSIONAL SUMMARY

Flutter developer with 1.5 years of production experience building and shipping mobile applications end-to-end. Primary developer of a multi-tenant clinic management platform at VARX — a doctor app of 60+ screens and a patient companion app, both live on Google Play and serving 30+ clinics — built on Cubit/BLoC and Clean Architecture with real-time SignalR updates, push notifications and a shared component library. Experienced across healthcare, e-commerce and HR domains, and comfortable owning a feature from API integration through Play Store release. Strong algorithmic foundation with 1,200+ problems solved on Codeforces.

PROFESSIONAL EXPERIENCE

Flutter Developer — VARX, Damascus, Syria **05/2025 – Present**

Clinic System — Doctor Application Live on Google Play · 05/2025 – Present

- Primary developer of the doctor-facing clinic platform — 60+ screens covering patient records, appointments, live queue, prescriptions, invoicing, medical services, medicines, vacations and subscriptions; in production across 30+ clinics.
- Implemented the client side of a multi-tenant system — clinic-level tenants with role-based permissions, subscription plans and tenant-scoped data.
- Implemented real-time updates over SignalR for the live patient queue and appointment status, plus Firebase Cloud Messaging push notifications with deep-link routing into the target screen.
- Built the shared core layer of 18 services: Dio API client with centralised error extraction and logging, JWT session handling, Google Sign-In, multipart upload, file and image pickers, connectivity and runtime permissions.
- Created an in-house component library reused across 60+ screens and both apps: server-paginated searchable dropdowns, enum menus, date pickers, a reusable infinite-scroll pagination mixin with search, and skeleton loading states.
- Delivered statistics dashboards with fl_chart and Excel export of clinic reports.
- Implemented full Arabic / English localisation with RTL layout support and persisted language selection.

Clinic System — Patient Application Live on Google Play · 08/2025 – Present

- Built the patient-facing companion app: service and surgery appointment booking, prescribed medicines, and personal medical records covering allergies, lab analyses, radiology and procedures.
- Added scheduled local notifications and reminders for upcoming appointments, with doctor search, filtering and favourites.
- Reused the design system and core services from the doctor app, keeping both products consistent and eliminating duplicate implementation work.

Treema — E-commerce & Delivery Application 05/2025 – 06/2025

- Delivered the quick-cart checkout flow and order summary in a one-month engagement, including discount handling and final-price calculation.
- Implemented SKU browsing with lazy image loading on scroll, paginated order history, a delivery-agent module with status transitions, the product returns flow, and shareable product links.

HR Management Application 04/2026 – 05/2026

- Built attendance check-in / check-out with working state persisted locally so an active shift survives app restarts, plus working-hours tracking and attendance history.
- Added employment-status handling, an employee permissions module and Arabic error messaging.

Flutter Developer Intern — Darrebni, Remote **03/2024 – 07/2024**

- Awarded first place in the training programme and received a STEM certificate for outstanding performance (STEM Certificate · Recommendation Letter).
- Built mobile applications in Flutter covering responsive UI design, navigation, REST API integration, local databases, localisation, exception handling and state management.

TECHNICAL SKILLS

Languages & Databases: Dart, C++, C#, SQL, MySQL

Framework & UI: Flutter (Android & iOS), Material Design, responsive and adaptive layouts, custom reusable component libraries, fl_chart data visualisation, skeleton loaders, Arabic/English localisation with RTL support

State Management & Architecture: Cubit / BLoC, GetX, Provider, Clean Architecture, MVVM, OOP, Clean Code, dependency injection, role-based permissions

Networking & APIs: REST APIs with Dio, JWT authentication, Google Sign-In, multipart file upload, centralised API error handling, server-side pagination with search

Real Time & Messaging: SignalR, Firebase Cloud Messaging, deep linking, local and scheduled notifications, connectivity handling

Storage & Data: SharedPreferences, Hive, SQFLite, image caching, file storage and Excel export

Tools & Delivery: Git, GitHub, GitLab, FVM, Postman, Firebase, Figma, Adobe XD, Play Store release builds

Problem Solving: Competed three times in the university-level Collegiate Programming Contest (2023, 2024, 2025), qualifying in 2025 for the national SCPC (Syrian Collegiate Programming Contest); 1,200+ problems solved on Codeforces — algorithms, data structures and complexity analysis applied to production code

AI-Assisted Development: Claude, Gemini — prompt engineering, code review, refactoring and rapid prototyping

PERSONAL PROJECTS

Dawwen — Notes Application github.com/Zakarya-Jawish/dawwen · 11/2024 – 01/2025

- Flutter notes app with dark mode, multi-screen navigation and full CRUD — Hive local database, Cubit state management, Clean Architecture.

EDUCATION

B.Sc. in Information Technology Engineering — Software Engineering **04/2021 – Expected 2026**

Syrian Virtual University, Damascus, Syria

Technical Diploma in Software Engineering **10/2020 – 02/2023**

Damascus University, Technology Computer College

Continuous Learning: Flutter Advanced — BLoC & MVVM Pattern; Complete Flutter & Dart Development; Master Git & GitHub — Udemy, 2024–2025.

LANGUAGES

Arabic: Native speaker

English: Reads and understands technical documentation, code and English-language learning resources; follows spoken English in a work context. Basic written and spoken production — currently improving.
